IMPERATIVE FOR A "PERSPECTIVE BASED APPROACH TO REGULATORY COMPLIANCE

Regulatory Compliance (RC) describes the goal that organizations aspire to achieve in their efforts to ensure that they are aware of and take steps to comply with relevant laws, policies, and regulations. Due to the increasing number of regulations and need for operational transparency, organizations are increasingly adopting the use of consolidated and harmonized sets of compliance controls.

This approach is used to ensure that all necessary governance requirements can be met without the unnecessary duplication of effort and activity from resources..

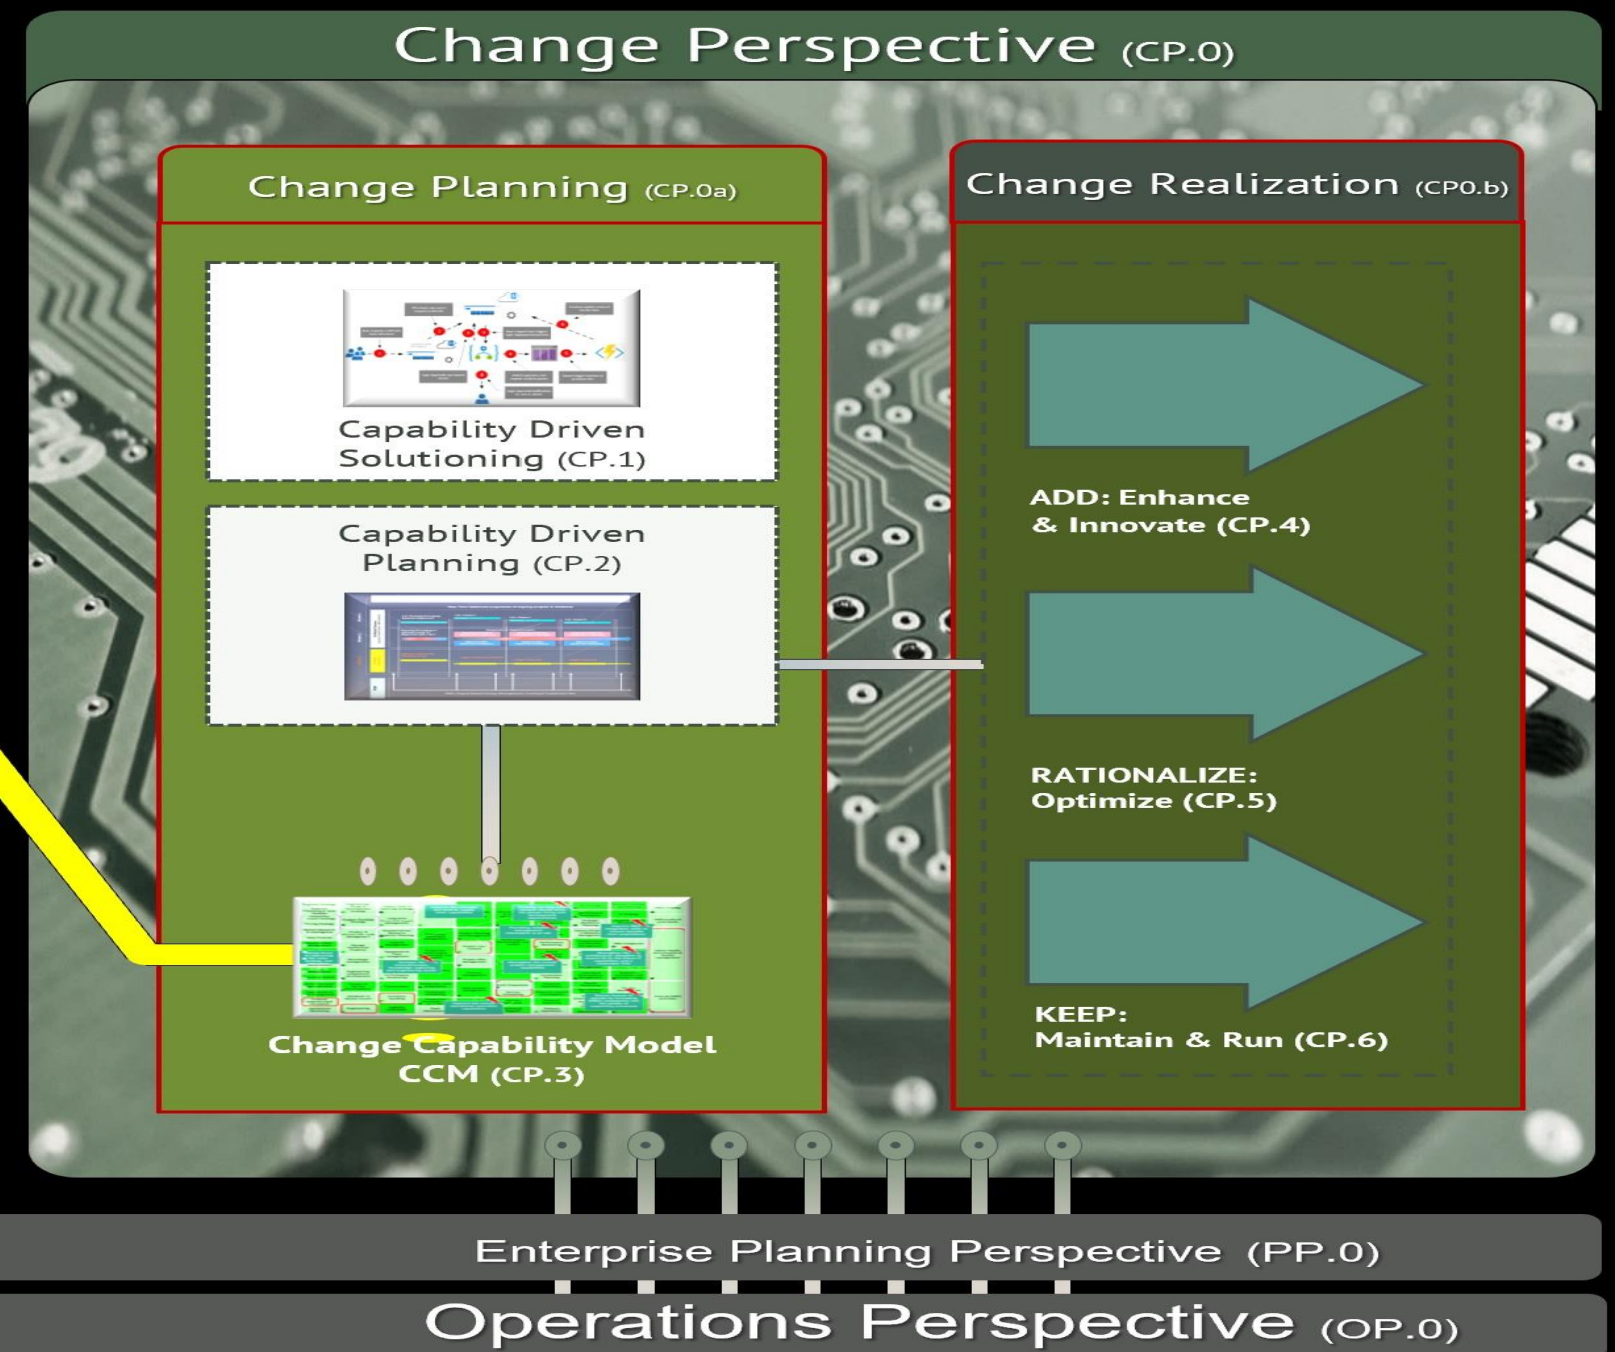

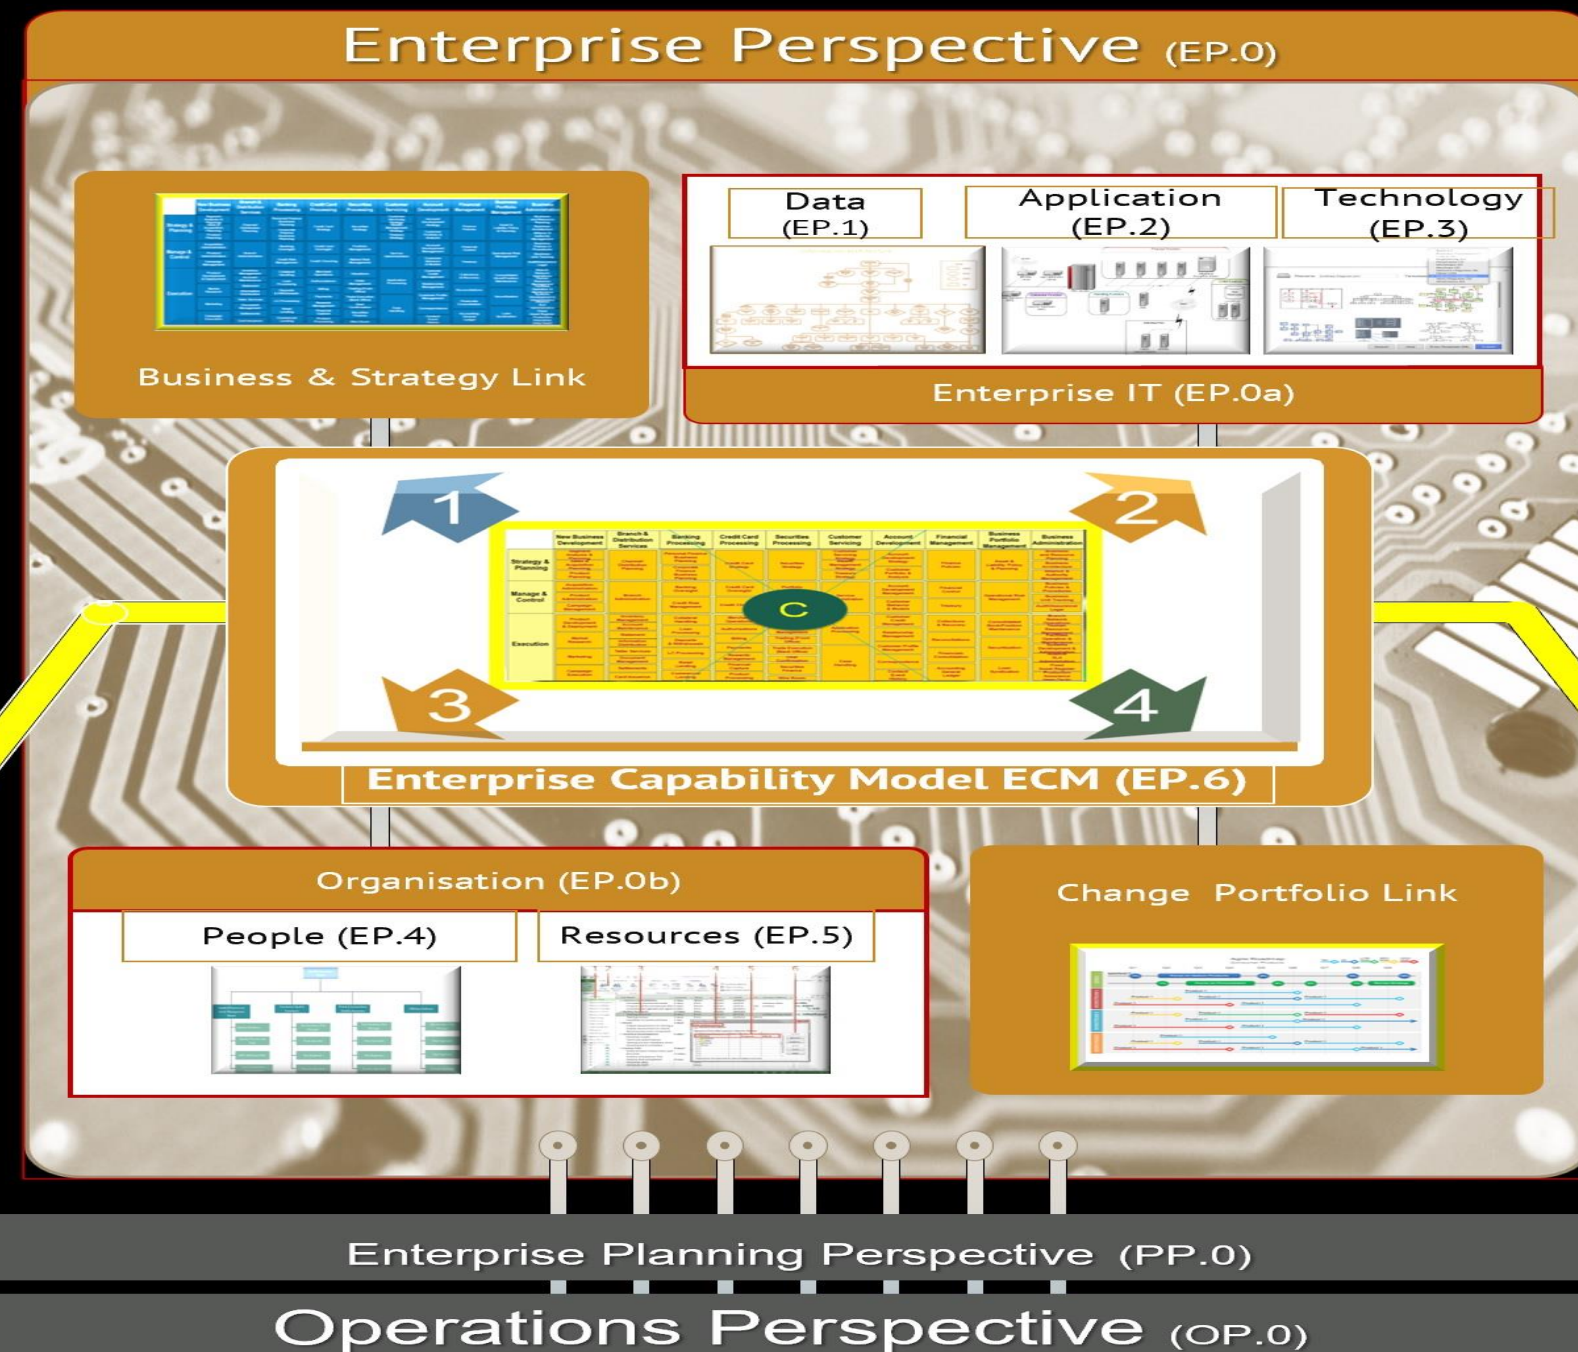

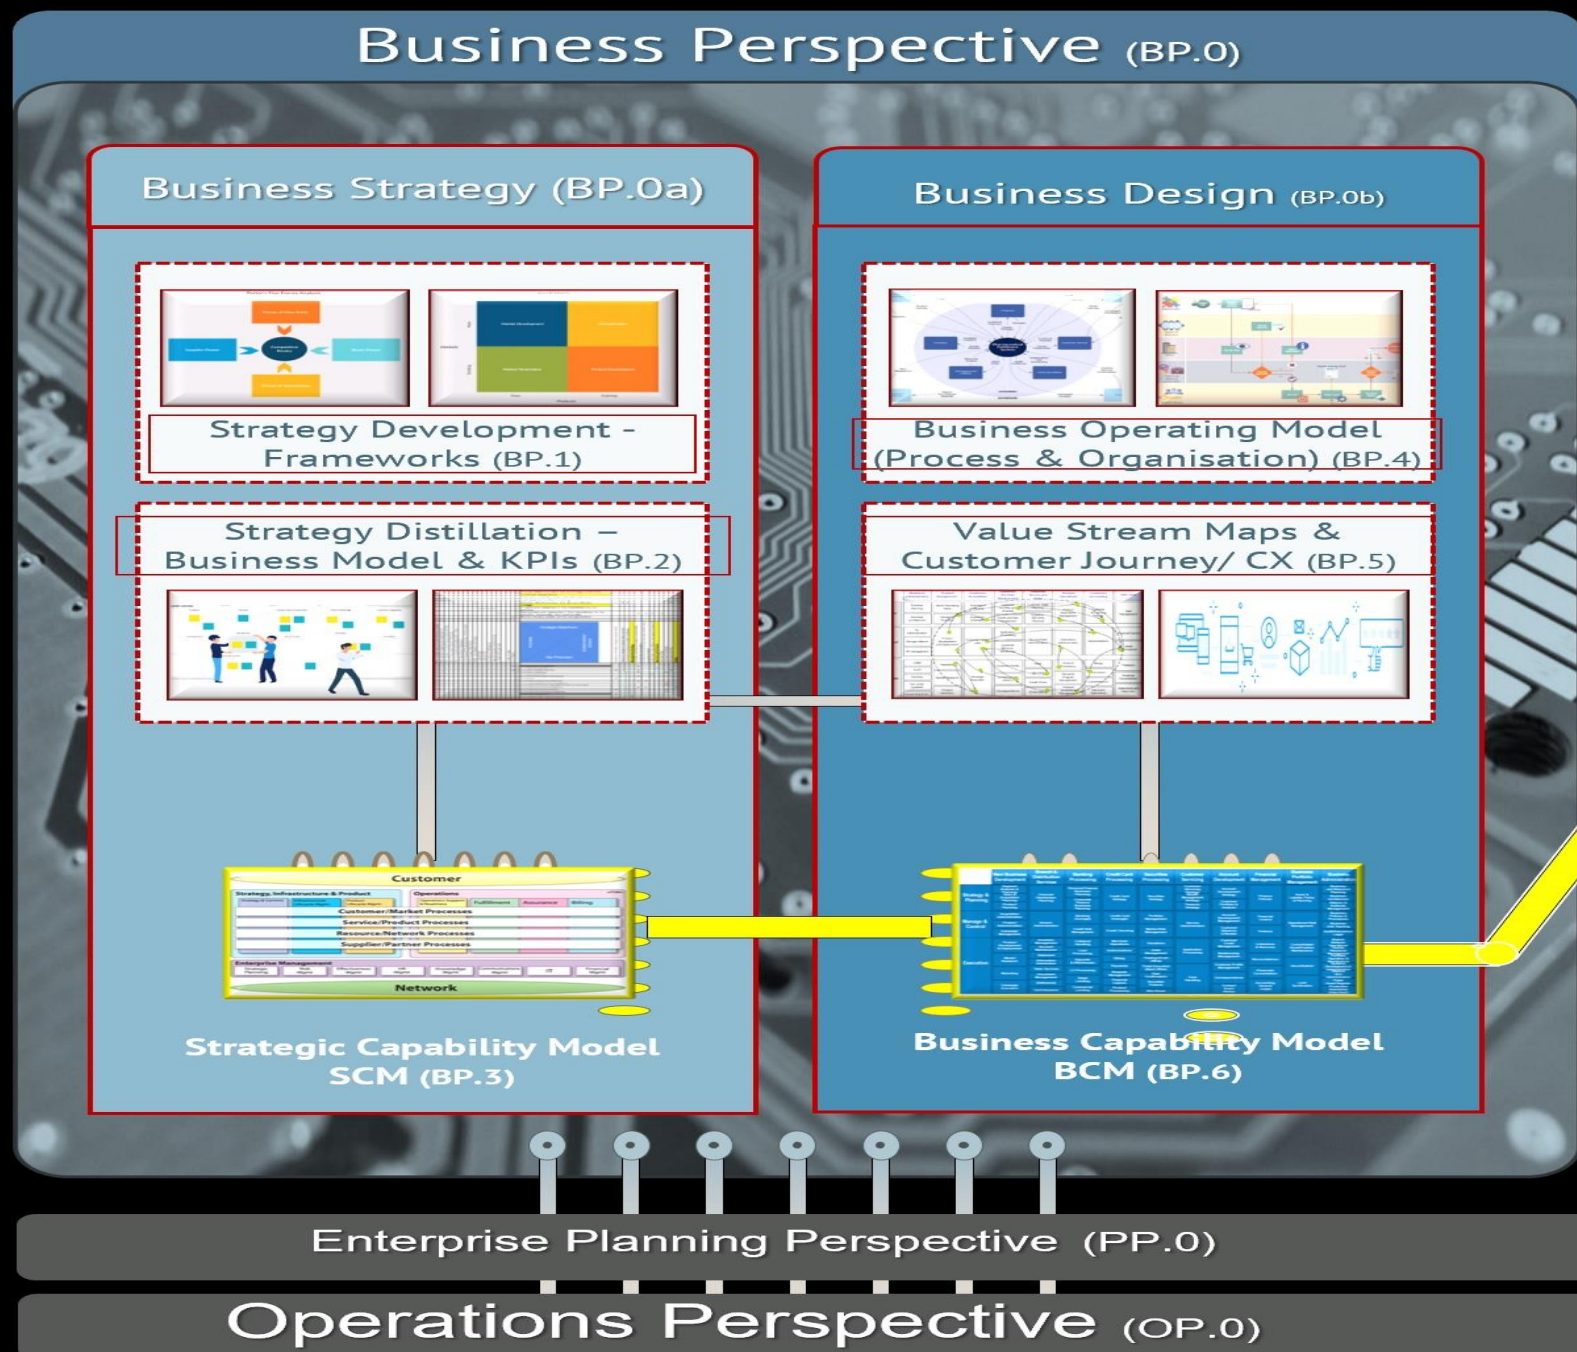

- This picture presents the scope of what must be covered under Regulatory Compliance
- Achieving Compliance is a highly challenging undertaking for business organizations
- Many companies start downstream and acquire "Compliance" Solutions and application
- Regulatory Compliance is a business focused concept, not a technology focused one, hence we must start from top level Business Strategy, then following downstream (Business Design, IT & Organization Architecture, to implemented solutions and technologies, with a approach that focuses on different "Perspectives" (based on a multi-layered architecture), to assess and determine exactly where Compliance is pertinent to the business and hence to the enterprise.

THE 4-STAGE EVOLUTION OF THE CAPABILITY MODEL (XCM)

1-SCM – WHAT does the Business want to be and do?

What Strategic Capabilities best support key strategic products and services, and how do we measure and monitor fulfillment of target capabilities?

SCM

3- ECM - HOW does the Enterprise operate (to optimally accommodate and implement the Business)?

What Enterprise Capabilities best support target Business Capabilities (and hence implicitly Strategic Goals and KPI's) with optimized Organisation, Technology, and Planning, where are the commonalities to leverage to optimize, and, where can we differentiate?

ECM

2-BCM – HOW does the Business operate (function & Structure)?

Business Capabilities can best support baselined Strategic Capabilities, what Business Service Capabilities are needed for the Business to operate optimally to fulfill Strategic Goals and KPI's, and, where can we differentiate?

BCM

4- CCM – How are changes solutioned and planned to be implemented to make the Business agile and achieve new Business requirements?

Which are the areas for Implementation, Change or Transformation to achieve optimized improvement for change Program to be planned or prioritised?

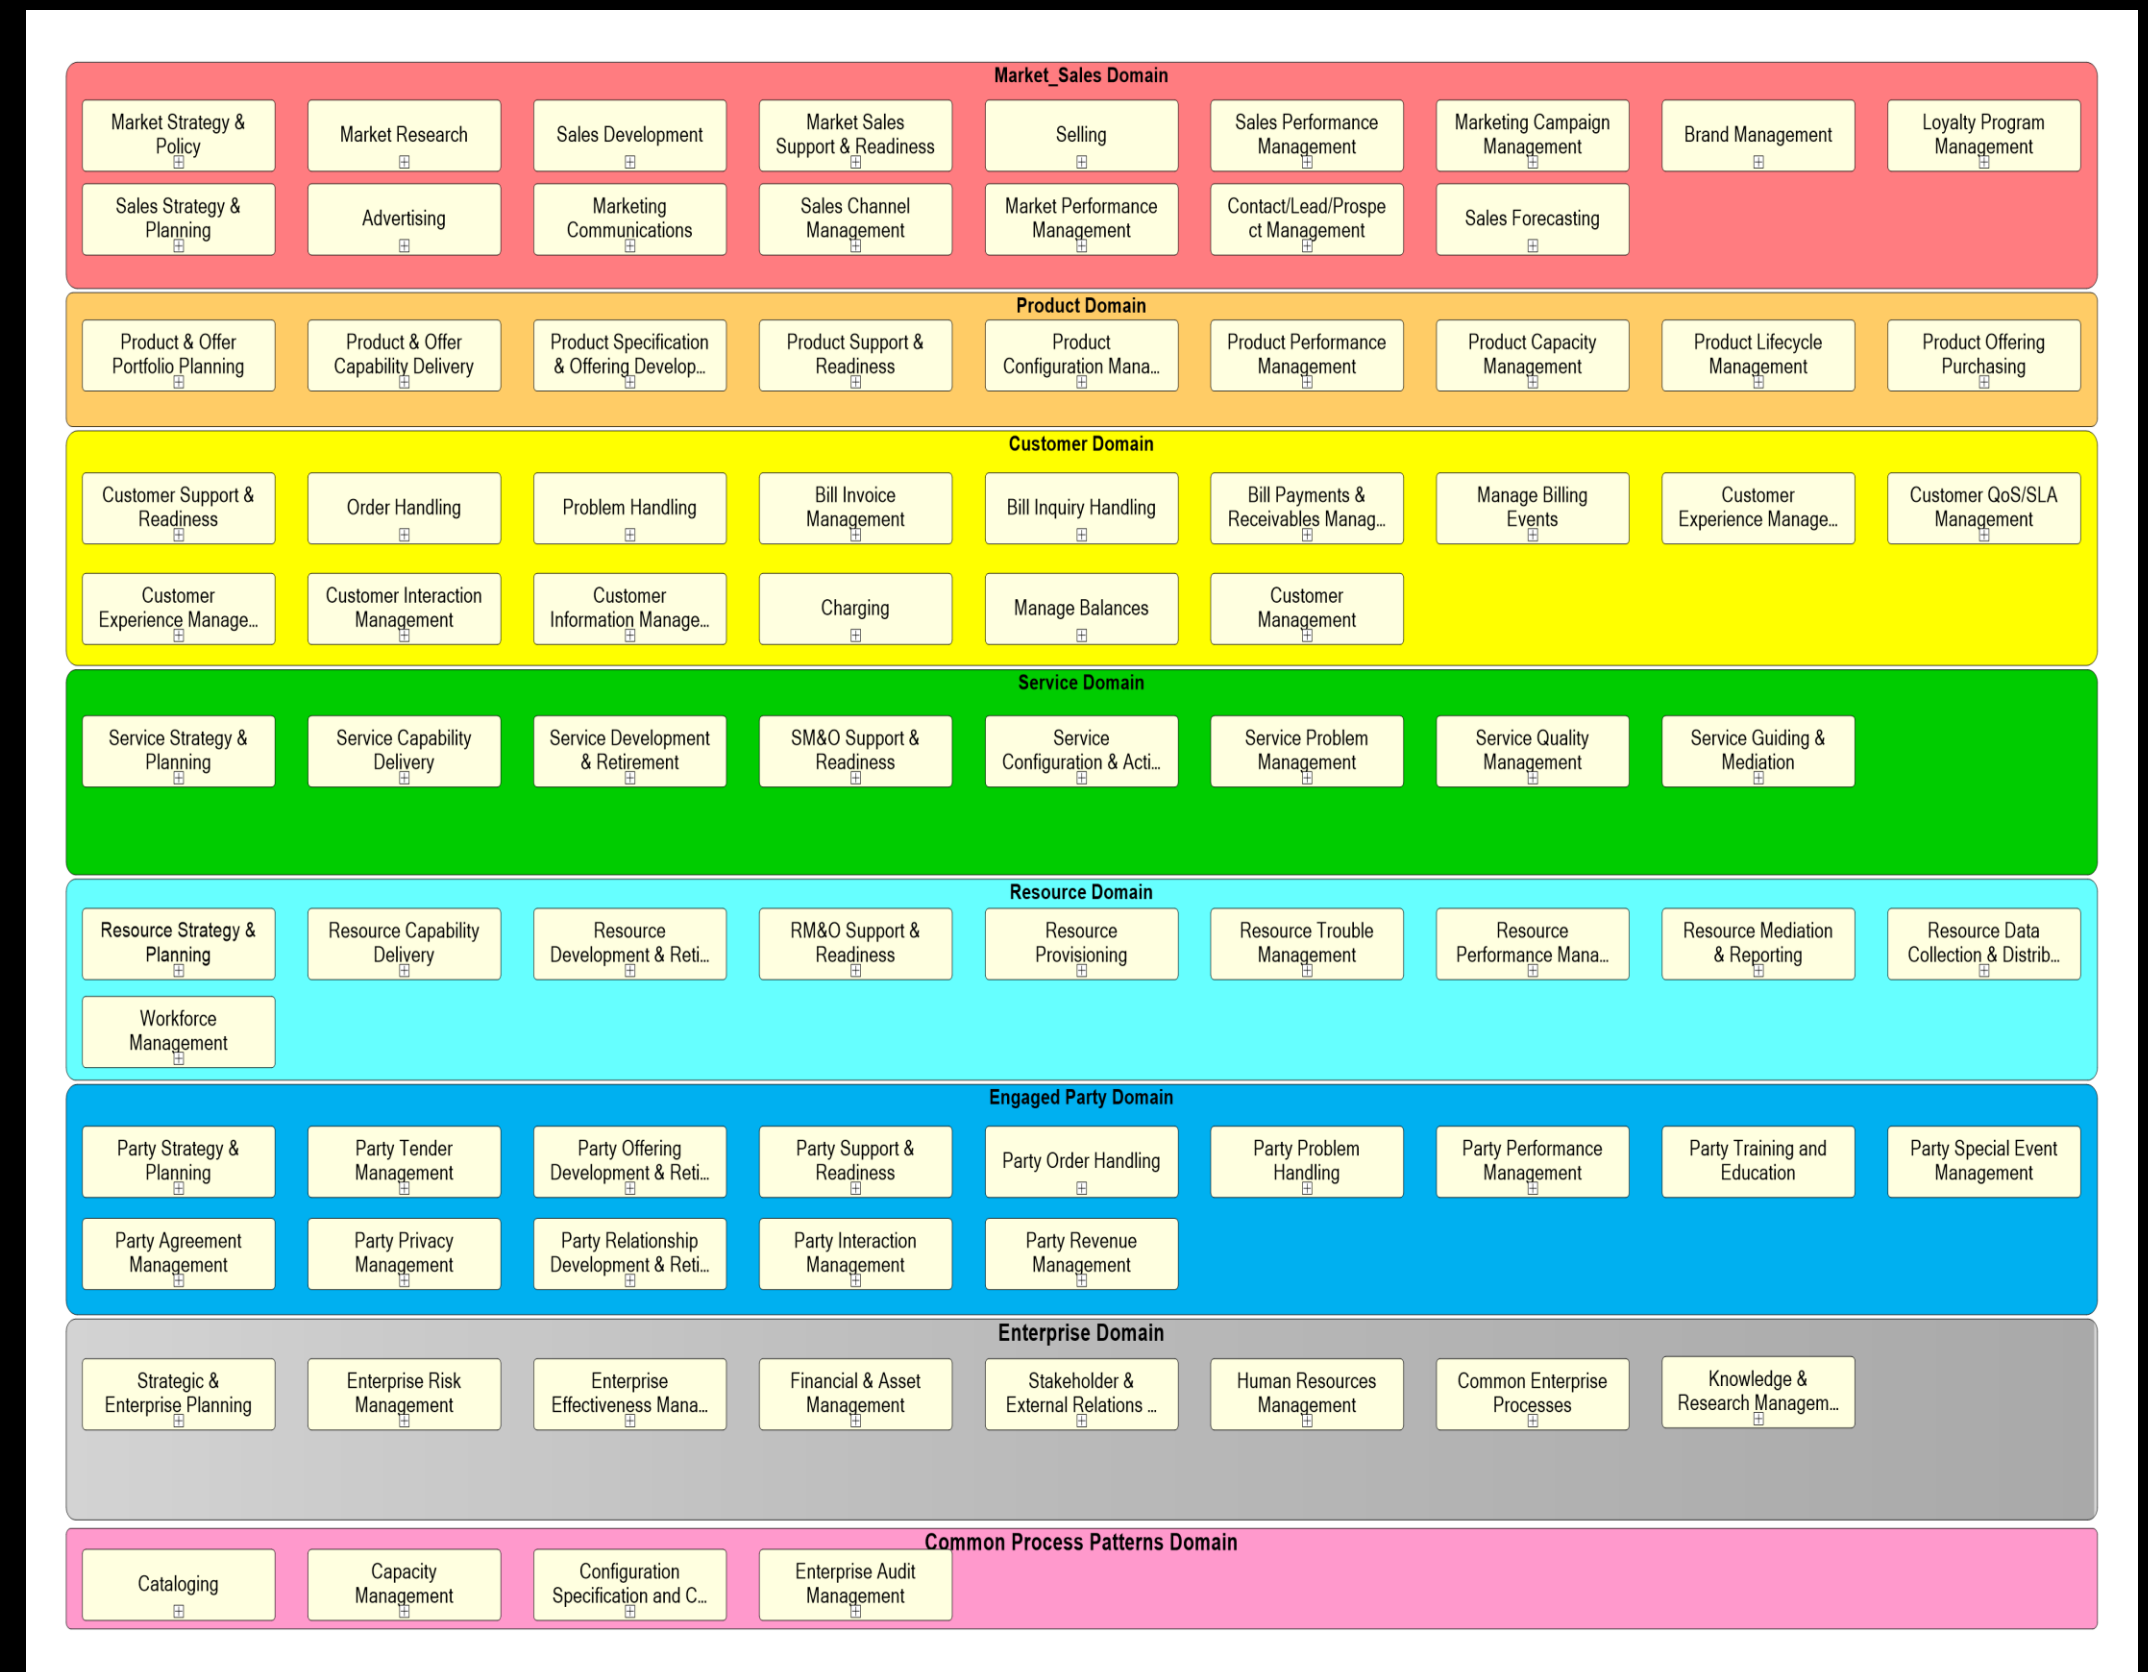

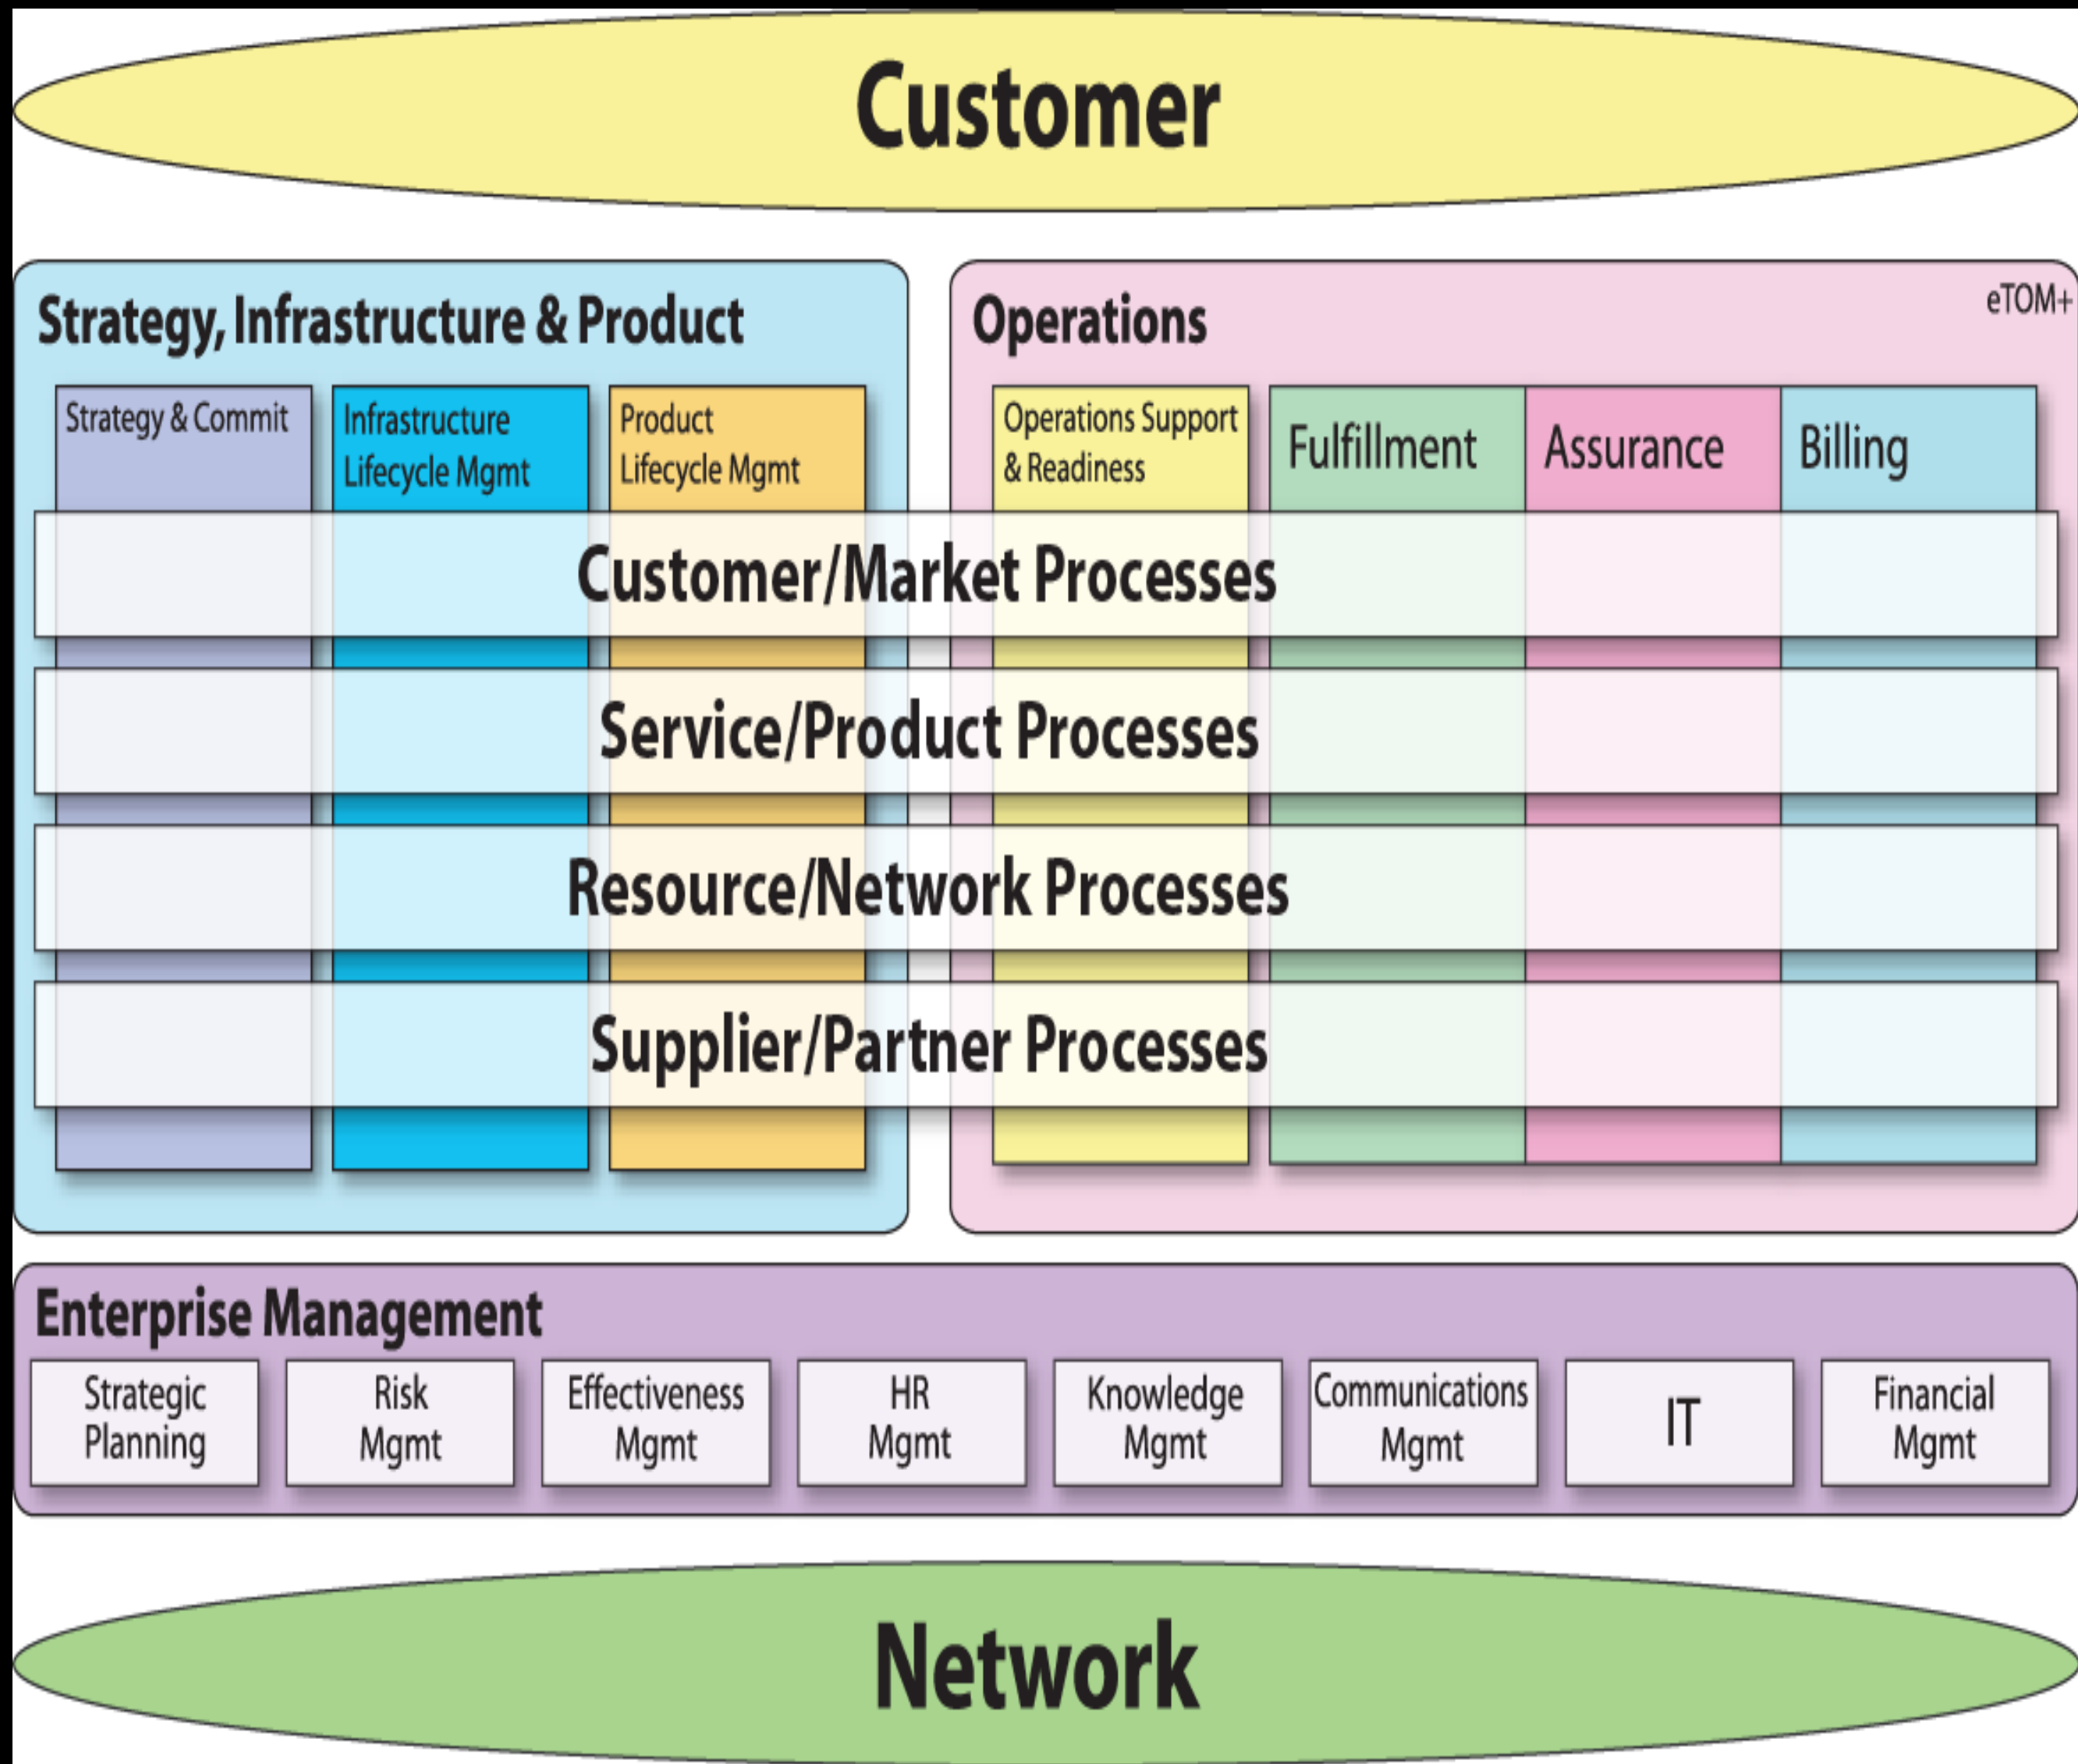

CCM

WHAT IS THE FOCUS IN REGULATORY COMPLIANCE (RC)

- The aim is to find and focus on the specific requirements or shortcomings with regards to RC.
- **SCM**- Analyse and assess the key strategic capabilities, dissect them, identify and locate where the “delta” changes are applicable (where in the strategic capabilities we need to apply changes to adhere to RC requirements specifications), AND ESTABLISH ADHERENCE TO THE RC REQUIREMENTS, taking into account QUALITY, EFFECTIVENESS, AND STRATEGIC BUSINESS VALUE
- **BCM**- Analyse and assess the key business capabilities (business operating model (process and structure), dissect them, identify and locate where the “delta” changes are applicable (where in processes/services/organisation/cx we need to apply changes to adhere to rc requirements specifications), AND ESTABLISH ADHERENCE TO THE RC REQUIREMENTS, taking into account QUALITY, EFFECTIVENESS, AND STRATEGIC BUSINESS VALUE
- **ECM**- Analyse and assess the key enterprise capabilities and their impact (it & technology, organisation, change portfolio, and business value), dissect them, identify and locate where the “delta” changes are applicable (where we need to apply changes to adhere to rc requirements specifications), AND ESTABLISH ADHERENCE TO THE RC REQUIREMENTS, and conduct accelerated heat-mapping to identify priorities and constraints
- **Ccm**- Analyse and assess the key change capabilities involving rc requirements, devise the best capability-driven solutioning and planning, dissect them, and establish their impact on the implementation landscape and devise the best approach to have the rc change requirements implemented
